Fourier transform of sinc function using matlab

$$X(\omega) = \frac{\sin[\omega(N + \frac{1}{2})]}{\sin(\omega/2)}$$

Under suitable conditions F (Definition). The discrete-time Fourier transform of a discrete sequence of real or complex numbers $x[n]$, for all integers n , is a Fourier series, which produces a periodic function of a frequency variable. When the frequency variable, ω , has normalized units of radians/sample, the periodicity is 2π , and the Fourier series is: p.147 Sinc interpolation is used to connect the channel filter coefficients and is shown as the interpolated path gains. These points are used solely for display purposes and not used in subsequent channel filtering. For a flat fading channel (one path), the sinc interpolation curve is ... Basic Example matlab/octave code to illustrate creating a user add-on. ... Transform a s-plane filter specification into a z-plane specification. ... Demonstrate the use of the Octave Fuzzy Logic Toolkit to approximate a non-linear function using a Sugeno-type FIS with linear output functions. Parameters x1 array_like. Dividend array. x2 array_like. Divisor array. If x1.shape!= x2.shape, they must be broadcastable to a common shape (which becomes the shape of the output).. out ndarray, None, or tuple of ndarray and None, optional. A location into which the result is stored. If provided, it must have a shape that the inputs broadcast to.
